

**igeomatic** is a partnership (SNC) gathering competences of three free-lancers:

## **Jean-Patrick GIRBIG, Pascal BENOIST, Dr Mounir AZOUZI**

**Jean-Patrick GIRBIG** is the founder of the EPSG ("European Petroleum Survey Group") and the APSG ("Americas Petroleum Survey Group") of which he remained a long time the chairman. He has a diploma of topographic engineer delivered by INSA (Strasbourg, France) and knows particularly well the Oil business like the BTP. He directed for a long time the Cartography department of Petroconsultants while bringing deep changes there.

**Pascal BENOIST** has a diploma of Land-surveyor ("Géomètre Expert-Foncier DPLG") supplemented by a high level diploma (Master) in Digital cartography and G.I.S. [Paris / IGN, France]. He carried out many G.I.S missions in the field of environmental sciences [Laboratory of geophysics at CEA] like in the field of telecommunication where he was responsible during several years for the topographic layer of engineering fixed and mobile network software of French editor CTS International / Mentum.

**Dr Mounir AZOUZI** has a diploma of Topographic engineer ("Ingénieur du Génie Rural et Géomètre") at EPFL (Lausanne, Switzerland) supplemented by a Master thesis in Geomatics (EPFL) plus a certification IMPA in project management. He assured a lot of GIS missions, mainly in the field of Land-registration and taught geomatics at University.

All three had the opportunity to work in various countries in the world.

Geomatic is the science and technology of the collect, analysis, interpretation and diffusion of geographical information (given spatialized geodata). It includes a great number of disciplines [topometry, topography, remote-sensing, GNSS surveys, G.I.S, cartography, webmapping, ...] which contribute to create a geo-localized but intelligent display of the physical world and environment which surrounds us. The **i** from igeomatic stands for fields which are important to us : Internet, Information, Interpretation, Image, International and ... Imagination.

The domain of activity of **igeomatic** goes from surveys to webmapping, while passing by geodata collect, processing and administration. By sharing our expertise in geodata processing, we have the assets in order to conceive complete solutions of decision-making aid.

**igeomatic** indicates also a network of complementary experts who allow us to answer easily all kinds of problems, from simplest to most complex, related to our sphere of main activity.

Our light and flexible organization like our great knowledge of the existent international geodata in terms of structure, availability, accuracy and costs, enable us to quickly provide a broad range of solutions.
